

## Prime Times – Intimate Care and Nappy Changing

Prime times of the day make the very best of routine opportunities to promote 'tuning-in' to the child emotionally and to create opportunities for learning. Nappy changing times are key times in the day for being close and promoting security as well as for communication, exploration and learning.

### Young children, intimate care and toileting

- Wherever possible, key persons undertake changing young children in their key groups; back-up key persons change them if the key person is absent.
- Changing areas are warm, appropriately sited and there are safe areas to lay young children if they need to have their bottoms cleaned.
- If children refuse to lie down for nappy change, they can be changed whilst standing up, providing it is still possible to clean them effectively.
- Each young child has their own basket with their nappies/pull ups and changing wipes.
- Key persons ensure that nappy changing is relaxed and a time to promote independence in young children.
- Young children are encouraged to take an interest in using the toilet; they may just want to sit on it and talk to a friend who is also using the toilet.
- They are encouraged to wash their hands and have soap and paper towels to hand. They should be allowed time for some play as they explore the water and the soap.
- Key persons are gentle when changing and avoid pulling faces and making negative comment about the nappy contents.
- Wipes or cotton wool and water are used to clean the child. Where cultural practices involve children being washed and dried with towels, staff aim to make reasonable adjustments to achieve the desired results in consultation with the child's parents. Where this is not possible it is explained to parents the reasons why. The use of wipes or cotton wool and water achieves the same outcome whilst reducing the risk of cross infection from items such as towels that are not 'single use' or disposable.
- Key persons do not make inappropriate comments about young children's genitals when changing their nappies.

- There may be time where a child may have a sore bottom which may have happened at home as a result of poor care; or the child may have eaten something that, when passed, created some soreness. The child also may be allergic to a product being used. This must be noted and discussed with the parent and a plan devised and agreed to help heal the soreness. This may include use of nappy cream or leaving the child without a nappy in some circumstances. If a medicated nappy cream such as Sudocrem is used, this must be recorded in accordance with the Childhood Illness & Medication Policy.
- Older children use the toilet when needed and are encouraged to be independent.
- Members of staffs do not wipe older children's bottoms unless there is a need, or unless the child has asked.
- Key persons are responsible for changing where possible. Back-up key persons take over in the key person's absence, but where it is unavoidable that other members of staff are brought in, they must be briefed as to their responsibilities towards designated children, so that no child is inadvertently overlooked and that all children's needs continue to be met.
- Parents are encouraged to provide enough changes of clothes for 'accidents when children are potty training.

#### **Nappy changing records.**

- Key persons record when nappies are changed and the contents of such.
- If there are concerns about the contents of the nappy – e.g. smell/texture, this will be recorded on a Child Health Monitoring Form.
- Very soft, watery stools are signs of diarrhoea; strict hygiene needs to be carried out in cleaning the changing area to prevent spread of infection. The parent should be called to inform them, and that if any further symptoms occur they will be required to collect their child in accordance with the Childhood Illness & Medication Policy.

Nappy changing & intimate care is always done within the open bathroom space and with the netted barrier closed to protect children's dignity and keep staff safe.
